SCREW PILE SYSTEM

**THE PILLARS
OF YOUR
PROJECTS**

STRONG.

DURABLE.

PRECISE.

STRENGTH & KNOW-HOW

TODAY'S SOLID CHOICE IN SCREW PILES

Screw piles have revolutionized how builders, contractors and landscapers are constructing foundations for commercial and residential structures. From large buildings to house additions and fences — anywhere traditional concrete piles would have been used to support the structure — screw piles are a stronger, more economical and durable choice. GoliathTech is proud to offer the best screw piles on the market.

- ✓ NO CEMENT MIXER
- ✓ NO EXCAVATION
- ✓ NO DAMAGE

Sometimes called helical piles — because of their helix shape — screw piles are installed deep beneath the ground freezing level. They provide solid support for the structure built on top. Screw piles have been used in construction since the mid-19th century, but only recently has the industry fully embraced this technology for use in landscaping and building projects.

“On top of getting the best price for my screw piles, the GoliathTech installers guided me toward the best solution for my project. I was right to trust them; my yard was not damaged and the workers were able to start building as soon as the piles were installed.”

JEAN-FRANÇOIS ROMPRÉ, Magog, Quebec

Light Structures

IDEAL FOR

- Balconies and galleries
- Patios
- Sheds
- Fences

Average Structures

IDEAL FOR

- Docks
- Solariums
- Walkways

Heavy Structures

IDEAL FOR

- Cabins
- Permanent or temporary agricultural infrastructures
- Extensions
- Building Foundations
- Bridges

EASY INSTALLATION. EASY ON YOUR BUDGET.

Screw piles are more durable and faster to install than concrete foundations and form tubes when it comes to foundations and structures.

RAPID INSTALLATION

Our screw piles are installed easily and quickly by certified experts using a lightweight hydraulic driving tool. It's a much faster process than building concrete pilings, because concrete pilings need cure (drying) time. Screw piles can be built upon immediately — so the project gets done faster.

LESS INTRUSIVE

No excavation is required, and the surrounding soil is barely disturbed. No need for concrete mixers, or a ton of machinery.

PRECISION ENGINEERING

GoliathTech's advanced engineering and manufacturing processes ensure that our screw piles provide a solid underpinning for perfectly level structures. Solid anchoring mechanisms prevent shifting of the pile, ensuring a stable and long lasting foundation.

ECONOMICAL

Because they install much more quickly, efficiently and economically than concrete solutions, choosing GoliathTech screw piles is a smart budget decision.

ANYWHERE, ANYTIME

Our screw piles can be installed in tight spaces, in any weather, and in virtually any soil — even difficult soil conditions and areas with high water content.

CERTIFIED INSTALLERS

Because the quality of the installation is as important as the quality of the piles, we have built a network of certified expert installers. They have the know-how to ensure correct installation and customer satisfaction throughout the project.

BUILD ON OUR SOLID FOUNDATION

1 STEEL CONSTRUCTION FOR LONG LIFE

High-quality galvanized steel that resists corrosion guarantees maximum life from our piles. No matter the type of soil, GoliathTech screw piles remain in perfect condition for a very long time.

2 DOUBLE PROTECTION AGAINST WEATHER

Our 60Ksi steel piles are fully galvanized to protect the tubes as well as the heads and helixes against physical deterioration. Furthermore, the tubes are filled with polyurethane to prevent ice accumulation inside the pile. This double protection fights frost and thaw soil movement on all fronts. Inside-out.

3 SUPERIOR ANCHORING RESISTS SHIFTING

GoliathTech pile heads have a nut-fastening system allowing the structure to be installed directly on the piles. The innovative anchoring prevents all lateral or vertical movement of the structure.

4 GOLIATHCONNECT GOES DEEP

Our reinforced joint system allows two tubes to be joined using a locking bolt, when longer piles are required. This innovation strengthens the long piles and eliminates all risk of movement.

Available in different size from 1 7/8 to 3 1/2 with helical from 8" to 13".

WE ARE GOLIATHTECH.

THE PILLARS OF YOUR PROJECTS.

For more than 10 years we have offered premier commercial and residential screw piling solutions in North America. Our advanced product engineering together with a wide network of certified installers has enabled GoliathTech to offer the marketplace a stellar solution at an affordable cost.

Our quality control processes set the bar high: We deliver only the best, beginning with our state-of-the-art design & manufacturing processes and ending with the expertise of our professional installers. GoliathTech offers a vast array of tubes and helices to support various weights and accommodate virtually any type of soil.

GoliathTech screw piles surpass the highest industry standards to guarantee a solid, long lasting foundation – without breaking the bank.

GoliathTech is ISO 9001:2008 and CWB certified.

Contact us today for a no-obligation professional assessment of your project! We'll tell you why a GoliathTech screw pile solution is the right choice for your building project.
